Abstract

1. Motor vehicle body and motor vehicle.
- 2.1. The invention relates to a motor vehicle body having at least two doors, which are arranged on one side of the vehicle, and a releasable body B-column, which is arranged between the two doors on the side of the vehicle in a position fixed on the body.
- 2.2. According to the invention, a first of the two doors can be opened either by means of first articulation means along a first trajectory or by means of second articulation means along a second trajectory.
- 2.3. Use, for example, for a variable door-opening system for easy loading with bulky goods.
